**Avian Diseases**

**Guidelines for Authors**

**General Information**

**Mission**

*Avian Diseases* is an international journal dedicated to publishing original basic or clinical research of the highest quality from various disciplines including microbiology, immunology, pathology, and epidemiology. Papers on avian diseases relevant to etiology, pathogenesis, diagnosis, treatment, and control are considered. Manuscripts dealing with avian species other than poultry will be considered only if the subject is relevant to poultry health. The mission is to enhance scientific knowledge and promote poultry health.

**Original Manuscripts Only**

*Avian Diseases* will consider only original manuscripts not published or submitted for publication elsewhere. Abstracts printed as a part of the program of a meeting will not be considered as a prior publication. However, if the text, tables, and figures appear to be the same as that published elsewhere, *Avian Diseases* will not consider the manuscript.

**Reviewers**

All manuscripts are reviewed by one or more members of the Editorial Board or other persons selected by the editor. During the submission process, the submitting author should provide the names and contact information of three potential reviewers for the manuscript. The suggested reviewers should not be collaborators of any of the authors or from the same institution as any of the authors of the submitted manuscript. They do not have to be members of the Editorial Board. The editor might use any or none of the suggested reviewers.

**Copyright**

*Avian Diseases* is copyrighted by the American Association of Avian Pathologists (AAAP) and authors must sign a copyright transfer form before articles are published. The corresponding author must complete a copyright agreement form and page charge agreement form as part of the submission process. He or she will need to login using his/her username and password for this purpose. U.S. Government employees are exempt from this requirement if the work is considered part of their official duties.

The AAAP grants the following rights to the corresponding authors of the articles published in *Avian Diseases* reproduce the article by photocopying, reprint portions or the entire article in print or other media, display the article in public, incorporate the article in course packs, place the article in a digital repository or archive owned by the employee’s institution, or compile the article into a larger scholarly work. Reprinting and reproduction of the article or parts of the article in any form and in any language must clearly display a complete reference to its original publication in *Avian Diseases*.

For National Institutes of Health (NIH)-sponsored publications, *Avian Diseases* grants the corresponding author permission to provide a copy of the accepted manuscript to the NIH upon acceptance for publication, with public release in PubMed Central, twelve months after final print publication by the journal.

**Cost**

Effective January 1, 2019 page charges are waived for all AAAP Members. A page charge for each printed page or part thereof is assessed on each article appearing in *Avian Diseases*. The page charge is $50 for non-AAAP members. Authors are encouraged to become AAAP members.

There is no longer a charge for color images. Authors are encouraged to submit images in color for print and online.

If an author (AAAP Member or non-member) makes changes to his/her manuscript after the manuscript has been type set, the author will be billed at a rate of $5.00 per change.

Parties designated in the page charge agreement for payment will receive a bill via email from the American Association of Avian Pathologists, Inc. just before or after publication of their manuscript. Payment is due within 30 days from receipt. Please contact the Avian Diseases office if an invoice is needed before publication of the article.

**Manuscript Instructions**

**Cover Letter**

Submit a cover letter separate from the manuscript. It should be addressed to the editor, requesting consideration of publication of the article in *Avian Diseases*. Include any pertinent information that will be helpful in evaluating the suitability of the article.
