BioOne Complete (complete.BioOne.org) is a full-text database of 200 subscribed and open-access titles in the biological, ecological, and environmental sciences published by nonprofit societies, associations, museums, institutions, and presses.

Your use of this PDF, the BioOne Complete website, and all posted and associated content indicates your acceptance of BioOne's Terms of Use, available at www.bioone.org/terms-of-use.

Usage of BioOne Complete content is strictly limited to personal, educational, and non - commercial use. Commercial inquiries or rights and permissions requests should be directed to the individual publisher as copyright holder.

BioOne sees sustainable scholarly publishing as an inherently collaborative enterprise connecting authors, nonprofit publishers, academic institutions, research libraries, and research funders in the common goal of maximizing access to critical research.

Our recent article (*Auk* 132:647–656, 2015) did not describe a new subspecies, though we may have created that misperception, especially by suggesting a new scientific name. We also caused confusion because the suggested name (*johnsoni*) and its explanation (two persons) were inconsistent. We hereby withdraw the suggested name. Our aim was *not* to describe any subspecies, but to show that two flyway populations of the same species differ significantly in morphometrics in an adaptive way. This demonstrates ongoing evolution in two directions. We believe that both flyway populations differ so strongly that they deserve to be considered different subspecies, but we readily leave the official description to an experienced taxonomist. Should a new subspecies be described, we recommend naming it in honor of two long-term students of the species, Oscar W. and Patricia Johnson.
