BioOne Complete (complete.BioOne.org) is a full-text database of 200 subscribed and open-access titles in the biological, ecological, and environmental sciences published by nonprofit societies, associations, museums, institutions, and presses.

Your use of this PDF, the BioOne Complete website, and all posted and associated content indicates your acceptance of BioOne's Terms of Use, available at www.bioone.org/terms-of-use.

Usage of BioOne Complete content is strictly limited to personal, educational, and non - commercial use. Commercial inquiries or rights and permissions requests should be directed to the individual publisher as copyright holder.

BioOne sees sustainable scholarly publishing as an inherently collaborative enterprise connecting authors, nonprofit publishers, academic institutions, research libraries, and research funders in the common goal of maximizing access to critical research.

Book Review:

VETERINARY CLINICAL PARASITOLOGY

by Margaret W. Sloss.

Iowa State University Press, Ames, Iowa. Fourth edition, 1970. 250 pp., 298 ill. \$7.95.

This is the latest edition of a pictorial handbook of clinical veterinary parasitology—a photographic guide to what the practicing veterinarian or the veterinary student sees in the fecal examination or the skin scraping. As such it is an invaluable aid. Anyone who has ever puzzled over the sketches of ova that appear in most standard textbooks of parasitology will deeply appreciate this little book with its photomicrographs.

Although written as a textbook for the veterinary profession, the book has considerable value to all those working on parasitic diseases in big game animals and should be in their libraries. Many of the parasitic genera are shared by both big game and livestock and one can learn to recognize their ova by using this book.
