The BioOne Digital Library (<https://bioone.org/>) provides worldwide distribution for more than 580 journals and eBooks from BioOne's community of over 150 nonprofit societies, research institutions, and university presses in the biological, ecological, and environmental sciences. The BioOne Digital Library encompasses the flagship aggregation BioOne Complete (<https://bioone.org/subscribe>), the BioOne Complete Archive (<https://bioone.org/archive>), and the BioOne eBooks program offerings ESA eBook Collection (<https://bioone.org/esa-ebooks>) and CSIRO Publishing BioSelect Collection (<https://bioone.org/csiro-ebooks>).

Your use of this PDF, the BioOne Digital Library, and all posted and associated content indicates your acceptance of BioOne's Terms of Use, available at www.bioone.org/terms-of-use.

Usage of BioOne Digital Library content is strictly limited to personal, educational, and non-commercial use. Commercial inquiries or rights and permissions requests should be directed to the individual publisher as copyright holder.

BioOne is an innovative nonprofit that sees sustainable scholarly publishing as an inherently collaborative enterprise connecting authors, nonprofit publishers, academic institutions, research libraries, and research funders in the common goal of maximizing access to critical research.

Book Reviews

EDITED BY R. TODD ENGSTROM

The following critiques express the opinions of the individual evaluators regarding the strengths, weaknesses, and value of the books they review. As such, the appraisals are subjective assessments and do not necessarily reflect the opinions of the editors or any official policy of the American Ornithologists' Union.

The Birds of Borneo.—Clive F. Mann. 2008. BOU Checklist No. 23. British Ornithologists' Union, Peterborough, United Kingdom. xvi + 440 pp., 68 color plates, 2 text figures. ISBN 9780907446286. Hardback, \$81.00.—In reviewing this volume, it is inevitable that I make a comparison with the similarly titled *The Birds of Borneo* by B. E. Smythies (1999, 4th ed. revised by G. W. H. Davison). Smythies and Davison provided detailed species accounts, including description, voice, habits, nests and eggs, and taxonomic remarks, as well as a general description of distribution, for all the birds of Borneo. *The Birds of Borneo* (2008; hereafter “the Checklist”) differs in that it has no descriptions of appearance, sounds, or habits and has only short summaries of habitat and the timing of nest records. The Checklist primarily serves as a list of known locations, with sources, where each of 630 bird species was recorded on Borneo and nearby islands, and in this respect it gives more detail than Smythies (1999). The location lists are generally thorough, although not entirely complete for all species, as some relevant papers are not cited. A search for the key words “bird” and “Borneo” in the online literature search engines Zoological Record and Web of Science yields at least 12 papers published between 1987 and 2007 that contain information on bird distributions on Borneo. Only six of these are cited in the Checklist. Papers published in ornithological journals are all represented in the citation list, but studies published in ecological or conservation journals are largely missing. Another potential source of bird locations for this checklist that remained unused is the online collection of bird sounds at www.xeno-canto.org/asia, where numerous Bornean bird species are documented with sound recordings, locations, and dates, including some locations not covered in the Checklist. Nevertheless, although missing a few sources, the Checklist by and large provides an accurate, referenced overview of the current knowledge of Bornean bird distributions. The Checklist, unlike Smythies (1999), includes 26 color photographs of Bornean birds and a beautiful and informative collection of 42 color photographs of different habitat types on Borneo.—MARTJAN LAMMERTINK, *Cornell Lab of Ornithology, 159 Sapsucker Woods Road, Ithaca, New York 14850, USA.
