BioOne Complete (complete.BioOne.org) is a full-text database of 200 subscribed and open-access titles in the biological, ecological, and environmental sciences published by nonprofit societies, associations, museums, institutions, and presses.

Your use of this PDF, the BioOne Complete website, and all posted and associated content indicates your acceptance of BioOne's Terms of Use, available at www.bioone.org/terms-of-use.

Usage of BioOne Complete content is strictly limited to personal, educational, and non - commercial use. Commercial inquiries or rights and permissions requests should be directed to the individual publisher as copyright holder.

BioOne sees sustainable scholarly publishing as an inherently collaborative enterprise connecting authors, nonprofit publishers, academic institutions, research libraries, and research funders in the common goal of maximizing access to critical research.

MARCH 2008/VOLUME 58 NUMBER 3

New AIBS Book Primes Scientists for Successful Media Interviews

Evolution, climate change, stem cell research—scientists are frequently called upon to provide expert information on hot-button issues that pervade the daily news headlines, yet most find themselves woefully unprepared for the bright lights of the television studio or leading questions from a newspaper journalist. A new publication from AIBS, *Communicating Science: A Primer for Working with the Media*, by Holly Menninger and Robert Gropp of the Public Policy Office, will prepare scientists for successful and effective media interviews.

Communicating Science outlines compelling reasons for scientists to interact with the media and describes key differences between journalism and science that may not be apparent to practicing scientists. Step-by-step, Menninger and Gropp walk scientists through the entire interview process, from appropriate questions to ask a reporter to practical advice for on-air or on-camera interviews.

The information and advice in *Communicating Science* is presented in eight easy-to-read chapters that provide vital information for scientists new to media outreach and even for seasoned experts, and it's an ideal text for a graduate course on science communication or a professional development course for students and faculty. The primer's authors speak from their own experiences as PhD scientists in the biological sciences with years of experience in media outreach.

Setting *Communicating Science* apart from other such guides are the first-person interviews with nearly a dozen scientists who have successfully navigated print, radio, and television interviews. The scientists—including “Island Snake Lady” Kristin Stanford, recently featured on the Discovery Channel show *Dirty Jobs*—share advice and experiences on a

number of topics, including safely speaking on behalf of an organization, avoiding trouble when discussing socially or politically controversial topics, and reflections on first interviews.

Communicating Science also provides worksheets for building a message framework with talking points, developing analogies, and using props to assist readers with interview preparation. The contact pages at the end of the book help readers organize journalists' contact information and keep track of potential contacts for future story pitches.

Communicating Science: A Primer for Working with the Media is available now at www.aibs.org/bookstore/.

Newt Gingrich, James Hansen, and Ira Flatow Added to AIBS Annual Meeting Program

The 2008 AIBS annual meeting, to be held 12–13 May, will explore the theme of climate, environment, and infectious diseases. Relationships among climate, the environment, and human health are manifested in infectious disease patterns, notably seasonality. Vector-borne diseases, such as malaria, dengue, avian influenza, and SARS, are known to be closely linked to the environment and, more recently, to climate. Investigators in the United States and abroad have studied interactions among climate, climate change, and the environment extensively, and the AIBS annual meeting will address these issues.

The meeting will take place at the Westin Arlington Gateway hotel in Arlington, Virginia. The program chair is 2008 AIBS President Rita Colwell, of the University of Maryland at College Park. Registration and poster submission forms are online at www.aibs.org/annual-meeting/annual_meeting_2008.html.

Program and Schedule

Opening Remarks

- 2008 AIBS President Rita Colwell, University of Maryland, College Park

Keynote Speaker

- Newt Gingrich (former speaker of the US House of Representatives): “A Contract with the Earth”

Plenary Speakers

(in order of presentation)

- James E. Hansen (National Aeronautics and Space Administration): “Global Warming: The Threat to Life”
- Durland Fish (Yale University): “Environmental Determinants of Lyme Disease Risk”
- Howard Frumkin (National Center for Environmental Health): “The Public Health Response to Climate Change”

Endnote Speaker

- 2008 AIBS President Rita Colwell

Special Sessions

- Special Session 1: “Science and Society: the Art of Communication”
Convenor: AIBS

Moderator: Ira Flatow, host of National Public Radio’s “Talk of the Nation: Science Friday”

Participants: Robert Morris (author of *The Blue Death: Disease, Disaster, and the Water We Drink*) and Kim Stanley Robinson (author of *Sixty Days and Counting*)

- Special Session 2: “Climate Change and Human Health: Developing Collaborations with the Public Health Community”
Convenor: National Council on Science and the Environment

Workshops

- Workshop 1: “Your Classroom: Integrating Case Studies and Evolution to Help Students Understand Infectious Disease”
Convenors: Biological Sciences Curriculum Study and the National Association of Biology Teachers
- Workshop 2: “A Scientist Walks into a Bar: Using Science Cafés to Reach the Public”

Profiles in Biology Web Site

The AIBS Office of Education and Outreach is working with the Alfred P. Sloan Foundation to create a “Profiles in Biology” Web page, a resource that will highlight different career paths for students interested in pursuing careers in biology. The information will be on the Web sites of both AIBS (*www.aibs.org/careers*) and the Sloan Career Cornerstone Center (*www.careercornerstone.org/profiles.htm*). Note that there are no profiles under “Biologists” on the Sloan Career Cornerstone Center’s site. For that reason, AIBS is seeking individual members who would be willing to have their profiles highlighted for this resource. AIBS members who agree to participate will receive a survey from the Alfred P. Sloan Foundation. The foundation will work with interested members to complete a profile, and participants may review the profile before the site is launched. If you are willing to be profiled, or if you have any comments or questions, please contact Sheri Potter at *spotter@aibs.org*.

PPO Posts Annual Report with a New Look

The 2007 Public Policy Annual Report is online with a new look. Read about the AIBS Public Policy Office’s activities and accomplishments of 2007 and learn how you can participate. Download the report at *www.aibs.org/public-policy/resources/2007AIBSPPO.pdf*.

NEON Conference Update

NEON science leaders from the Boulder office will soon participate in a gathering called Isoscapes 2008. A special NEON session has been added to the conference in Santa Barbara, California, 7–10 April. NEON staff will discuss a range of topics related to the observatory isotopes sampling plan. NEON scientists will have an opportunity at this session to describe how isotopic measurements in the observatory framework are broadly designed for biogeochemistry and organismal ecology and to obtain input and guidance

in refining the NEON measurement strategy. Attendees will receive a status update on NEON and on the use of isotopes in the Fundamental Instrument Unit and Fundamental Sentinel Unit design. Session leaders will seek community feedback on how best to describe the traceability from NEON scientific objectives to its measurement strategy.

New NEON Scientist Aims High

Brian Johnson has joined the Science and Education Office in Boulder, Colorado, as the NEON Airborne Observation Platform scientist. Johnson was formerly at Ball Aerospace and Technology Corporation, where he was responsible for managing the Earth Science Advanced Systems group, leading the development of instrument concepts and technologies for future National Aeronautics and Space Administration Earth Science space missions, and directing airborne sensor development. He earned his BS and MS in electrical engineering at the University of Wisconsin and his PhD in atmospheric and space sciences at the University of Michigan. Before joining Ball Aerospace, Johnson was a research scientist in the Atmospheric Chemistry Division at the National Center for Atmospheric Research in Boulder, Colorado. His research interests include the development of new sensor technologies and remote sensing techniques, and the application of remotely sensed data to atmospheric, climate, land use, and ecosystem studies.

"I joined NEON because of the compelling environmental questions being addressed," Johnson said. "The chance to work directly with NEON staff and the broader science community to help develop the remote sensing platform presented a unique opportunity that I just couldn't pass up."

Johnson directs development of the NEON Airborne Observation Platform, an important component of network design that complements the Fundamental Instrument Unit and the Fundamental Sentinel Unit, as well as the NEON Mobile Relocatable Platforms, which provide investigators with the flexibility to deploy instruments and collect data outside the fixed domain

Brian Johnson, NEON Airborne Observation Platform Scientist, is an electrical engineer and expert in airborne sensor development.

deployments. Johnson is currently refining the Airborne Observation Platform that will be the NEON "eye in the sky," featuring aircraft-mounted hyperspectral instruments and LiDAR, a remote sensing system similar to radar, used to collect the three-dimensional distribution of plant canopies and topographic data. These instruments will provide regional information for scaling and extrapolation of data from all NEON research sites, which will give researchers a detailed characterization of land use, canopy structure, and canopy chemistry over wildland sites, research transects, and areas of opportunity throughout the continental-scale network.

"There has been a great deal of effort by scientists and engineers over the last several years to improve remote sensing technology and data analysis techniques for ecosystem studies," Johnson said. "The use of these advanced technologies in the NEON Airborne Observation Platform will lead to tremendous advances in understanding how ecosystems will respond to changes in natural and human-induced forcings such as land use, climate, and invasive species over regional and continental scales."

New Developments at ActionBioscience.org

ActionBioscience.org, which is undergoing major technical and design changes, announced that the first step of the process has been implemented. The

Web site is being transferred from Front-Page to a new platform—Movable Type—which will allow more flexibility and ease of management. The transition is expected to be seamless, and visitors to the site should not be aware of the change. Visitors will see, however, a more readable, easier to navigate, and visually enhanced Web site. Educators and students, in particular, will appreciate the change to a printer-friendly technology. Future plans for the site include an "educator portal" where educators can find lessons and other resources, participate in a blog about educational technology, and learn about AIBS educational programs and projects.

TC5000

New from Meiji Techno

Designed with Meiji's ICOS Infinity Corrected Optical System - the new TC Series of Inverted Microscopes by Meiji Techno incorporates world class optics in a cost effective platform offering a higher standard in specimen observation.

With a host of new features and options, the TC Series makes cell checking faster, clearer and easier than ever before.

Ask your Meiji dealer for a demonstration today !
