

Appendix 2: Specimen vouchers for the seed photographs

Collections of seeds made by Botanic Gardens and Parks Authority (Perth, Western Australia) seed collectors are supported by herbarium specimens taken at the time of collection. These herbarium specimens are identified by the Herbarium Botanist and are linked to the seed collections by the collection number. This number links all the records of the collection and ties the naming of the spec-

imen to the seed collection and living plants derived from the collection. This appendix lists the names of the seeds in the photographic section with the collection number to provide a direct link to the naming and collection records. Specimens are lodged at the Western Australian Herbarium (Perth) and Kings Park and Botanic Garden Herbarium (KPBG).
