

# Acknowledgements

The Australian Biological Resources Study (ABRS), through its National Taxonomy Research Grant Program (NTRGP), funded our research on the Australian Cerambycidae which was undertaken with generous support from the CSIRO Ecosystem Sciences. The Department of Agriculture, Fisheries and Forestry (DAFF), and the Australian Biological Resources Study (ABRS) provided resources and help towards publication of this volume. CSIRO Library services provided innumerable references through interlibrary loans and attended to our requests with patience and professionalism.

This book would have never been published in the present form without the help and very generous support of Alice Wells (ABRS) who provided constant editorial support and advice throughout the long period of completing the book. Alice critically read and corrected the entire text, greatly improving the language and clarity of our writing. She has been very understanding and resilient while carrying out the stressful duty of pushing us to the finish line. Brigitte Kuchlmayr (ABRS) expertly designed and set up the book, which is very much appreciated.

The critical help of many colleagues at CSIRO Ecosystem Sciences is gratefully acknowledged, foremost that of Anne Hastings for her artwork, photographs and help with graphics side of the book. Cate Lemann provided constant support in our day-to-day work at ANIC and helped with hundreds of photographs of beetles, dissections and keys to genera. John F. Lawrence critically read the morphology chapter, providing many corrections and suggestions. Tom Weir and Kim Pullen tested the key to the genera and shared their extensive knowledge on Australian beetles. Rolf Oberprieler has helped with translations from German and Latin. Marianne Horak has supported us with her friendship and stimulating discussions.

Andrew Calder during his tenure at CSIRO initiated studies on the Australian Cerambycidae and his notes, draft checklists, databases, references and his curatorial work in ANIC greatly facilitated our research.

We are very grateful to the following curators and their institutions for loan of critical material for our study and for their support and assistance during our visits to their collections: Derek Smith, Chris Reid (AM); Lee Herman (AMNH); David Kavanaugh, Jere Schweikert (CAS); Max Barclay, Roger Booth (BMNH); Shepherd Myers (BPBM); François Gernier (CMN); Patrice Bouchard (CNC); Peter Gillespie, Graham Goodyer, Christine Stone (DARI); Eduard Vives (EVC); Dirk Ahrens (FAK); Ottó Merkl, Aranka Grabant (HNHM); Phil Perkins (MCZ); Giulio Cuccodoro (MHNG); Azadeh Taghavian (MNHN); Roberto Poggi, Maria Tavano (MSNG); Ken Walker (MV); the late Michel Brancucci, Daniel Burckhardt, Eva Sprecher, Isabelle Zürcher (NHMB); Bert Viklund (NRM); Gavin Dally (NTMD); Haidee Brown (NTDA); Justin Bartlett (QDPIB); Geoff Monteith, Geoff Thompson (QMB); Alain Drumont (RBI); Peter Hudson (SAM); Steve Lingafelter (USNM); Joahim Willers (ZMB); Ralph Peters (Zoologisches Museum Hamburg).

Our heartfelt thanks go to our colleagues worldwide working on Cerambycidae: Steven Lingafelter (USDA, USA) supported HE's visit to the USNM through the Smithsonian Institution grant and provided help and advice on the project; Petr Švácha (Czech Academy of Sciences, Czech Republic) generously shared his enormous knowledge of longhorns including drafts of his chapters for the Handbook of Zoology; Duane McKenna (University of Memphis, USA) shared his unpublished data on
