Lake Shore Drive, Chicago, Illinois 60605, USA; and 12University of Alaska Museum, 907 Yukon Drive, Fairbanks, Alaska 99775, USA

This is the 13th supplement since publication of the seventh edition of the Check-list of North American Birds (American Ornithologists’ Union [AOU] 1998). It summarizes decisions made between 1 May 2012 and 15 May 2013 by the AOU’s Committee on Classification and Nomenclature—North and Middle America. The Committee has continued to operate in the manner outlined in the 42nd Supplement (AOU 2000). Adolfo Navarro, of the Universidad Nacional Autónoma de México, has recently been added to the committee; his term will begin in 2013–2014.

Changes in this supplement include the following: (1) six species (Pterodroma solandri, P. feae, Gallinula chloropus, Agapornis roseicollis, Nandayus nenday, and Leucosticte arctoa) are added to the main list on the basis of the new distributional information (including three species transferred from the Appendix); (2) one species (Artemisiospiza nevadensis) is added to the main list because of a split from a species already on the list; (3) two species names are changed (to Puffinus baroli and Myrmeciza zeledoni) because of splits from extralimital species; (4) two species (Schizophora veraeapicis and S. stenorhyncha) are added by being split both from an extralimital taxon (S. tardina) and from each other; (5) one species (Thalurania fannyi) is lost because of a merger with another species already on the list (T. colombica); (6) one species name is changed (to Loxops mana) by transfer from one genus to another; (7) the distributional statements or notes of three species (Automolus rubiginosus, Dendrocercus fuliginosus, and Trogodytes aedon) are changed because of splits of extralimital species; (8) one scientific name (Chlorospingus flavopeptus) is corrected in accordance with the rules of priority; (9) one genus (Piloscoptes) is added as a result of a split from another genus, resulting in a change to one scientific name (P. flammeolus); (10) five genera (Aphriza, Eurynorhynchus, Limicola, Trygonites, and Phylomachus) are lost by merger (into Calidris) and the scientific names of five species (C. virgata, C. pygmea, C. falcinellus, C. subrugicollis, and C. pugnax) are thereby changed, and one other genus (Chloropipo) is lost by merger (into Xenopipo) and the scientific name of one species (Xenopipo holochlora) is thereby changed; (11) two genera (Terenura and Pipra) are lost by being split, three genera (Euchrepomis, Dixipha, and Ceratopipra) are added as a result of these splits, and the scientific names of four species (Euchrepomis callinota, Dixipha pipra, Ceratopipra mentalis, and Ceratopipra erythrocephala) are thereby changed; (12) one genus (Margarobyas) is added and one genus (Gymnoglaux) lost because of a nomenclatural problem with the prior name; (13) the spelling of one genus name (Ptitiogonys) is corrected, with a resulting change in two species names (P. cinereus and P. caudatus) and one family name (Ptitiogonitidae); (14) the citation for nine species (Dendragapus obscurus, Limnodromus scolopaceus, Patagioenas fasciata, Tyrrannus verticalis, Salpinctes obsoletus, Oreothlypis

The author(s) are members of the American Ornithologists’ Union’s Committee on Classification and Nomenclature—North and Middle America, listed alphabetically after the Chairman.

One subfamily name (Drepanidinae) is deleted from the main list because of new phylogenetic data, and the species formerly included in this subfamily are moved to a new position within the family Fringillidae. New linear sequences are adopted for families in the order Charadriiformes, genera and species in the families Pipridae and Mimidae, and species in the genera *Callidris* and *Haemorhous*, all because of new phylogenetic data. The spelling of the name of one order (Pterocliformes) is corrected as a consequence of a previous correction to a family name.

Literature that provides the basis for the Committee's decisions is cited at the end of this supplement, and citations not already in the Literature Cited of the seventh edition (with supplements) become additions to it. An updated list of the bird species known from the AOU *Check-list* area can be found at http://checklist.aou.org/taxa/.

The following changes to the seventh edition (page numbers refer thereto) and its supplements result from the Committee's actions:

- pp. xvii–liv. Change the number in the title of the list of species to 2,090. Insert the following names in the proper position as indicated by the text of this supplement:
  
  **Pterodrominae**
  
  *Pterodroma solandri* Providence Petrel. (A)
  
  *Pterodroma feae* Fea's Petrel.
  
  *Puffinus baroli* Barolo Shearwater. (A)
  
  *Gallinula chloropus* Common Moorhen. (A)
  
  *Callidris virgata* Surfbird.
  
  *Calidris pugnax* Ruff.
  
  *Calidris falcinellus* Broad-billed Sandpiper. (A)
  
  *Calidris pygmea* Spoon-billed Sandpiper. (A)
  
  *Calidris subruficollis* Buff-breasted Sandpiper.
  
  **Pterocliformes**
  
  *Psiloscopus flavemolius* Flammulated Owl.
  
  *Margarobyas lawrencii* Bare-legged Owl.
  
  *Calidris subruficollis* Buff-breasted Sandpiper.
  
  *Calidris virgata* Surfbird.
  
  *Pterodroma solandri* Providence Petrel. (A)
  
  *Pterodroma feae* Fea's Petrel.
  
  *Puffinus baroli* Barolo Shearwater. (A)
  
  *Gallinula chloropus* Common Moorhen. (A)
  
  *Callidris virgata* Surfbird.
  
  *Calidris pugnax* Ruff.
  
  *Calidris falcinellus* Broad-billed Sandpiper. (A)
  
  *Calidris pygmea* Spoon-billed Sandpiper. (A)
  
  *Calidris subruficollis* Buff-breasted Sandpiper.

The sequence of families, and included genera and species, in the Charadriiformes to:

**BURHINIDAE**

**RECURVIROSTRIDAE**

**HAEMATOPODIDAE**

**CHARADRIIDAE**

**JANACIDAE**

**SCOLOPACIDAE**

**GLAREOLIDAE**

**STERCORARIIDAE**

**ALCIDAE**

**LARIDAE**

Change the sequence of species in *Calidris* to:

*Calidris tenuirostris*

*Calidris canutus*
Calidris virgata
Calidris pugnax
Calidris falcinellus
Calidris acuminata
Calidris himantopus
Calidris ferruginea
Calidris temminckii
Calidris subminuta
Calidris pygmea
Calidris ruficollis
Calidris alba
Calidris alpina
Calidris ptilocnemis
Calidris maritima
Calidris bairdii
Calidris minuta
Calidris minutilla
Calidris fuscicollis
Calidris subfuscicollis
Calidris melanotus
Calidris pusilla
Calidris mauri

Minus gundlachii
Minus graysoni
Minus gilvus
Minus polygloitos

Change the sequence of species in Haemorhous to:

Haemorhous mexicanus
Haemorhous purpureus
Haemorhous cassini

Move the genera Telespiza through Melamprosops, and their included species, to follow Pyrrhula pyrrhula.

Haemorhous solandri (Gould). Providence Petrel.

Habitat.—Pelagic waters; nests in burrows and rock crevices, mostly on forested slopes and mountain summits on islands.

Distribution.—Breeds primarily on Lord Howe Island, off Australia. Small numbers also breed on Philip Island off Norfolk Island; formerly bred on Norfolk Island.

Ranges at sea in the Tasman Sea (some year-round) south to Tasmania; a few reach New Zealand waters. At least some of the population are trans-equatorial migrants and appear to be regular in the northwest Pacific from off Japan to southern Kamchatka.

Recorded (status uncertain, but possibly regular, especially in fall) on 15 September 2011, about 86 km north-northwest of Attu Island, Aleutian Islands—at least 10 individuals (many photographed) were noted (Cooper and Mackiernan 2012). Photos from off Westport, Washington, on 11 September 1983, and off Tofino, British Columbia, on 23 September 2006, might also pertain to this species.

Notes.—Also known as Solander's Petrel.

Change the sequence of species in the MIMIDAE to:

Habitat.—Pelagic waters; nests in burrows or crevices on islands.

Distribution.—Breeds on the Cape Verde Islands and on Bugio Island in the Desertas Islands; possibly also on the Azores.

Ranges at sea in the eastern North Atlantic, at least casually north to the United Kingdom.

Rare but annual in western Atlantic waters off North America; most records are in late spring and are from off North Carolina, but documented north to Nova Scotia and reported south to Georgia (Dunn et al. 2012). Accidental inland in Virginia
following Hurricane Fran (September 1996; Howell 2012). Data from geolocators indicated that one individual from Bugio Island (of 17 tracked) wintered off the coast of Georgia and Florida in 2007–2008 (Ramírez et al. 2013).

Notes.—This North Atlantic species and *Pterodroma madeira* Mathews, 1934 [Zino’s Petrel] were treated as separate species from *P. mollis* by Bourne (1983). The two geographically well-separated populations of *P. feae*, from Cape Verde Island and the Desertas Islands, have been treated as separate species—*P. feae* [Fea’s Petrel] and *P. deserta* Mathews, 1934 [Desertas Petrel], respectively—on the basis of differences in nesting phenology and vocalizations (Robb and Mullarney 2008). Fea’s Petrel (*sensu lato*) is also known as Cape Verde Petrel.

p. 22. *Puffinus baroli* is treated as a species separate from *P. assimilis*. Remove the account for *P. assimilis* and insert the following new species account:

**Puffinus baroli** (Bonaparte). Barolo Shearwater.

*Procida baroli* Bonaparte, 1857, Consip. Gen. Avium 2:204. (ex Mediterraneum...Insula deserta prope Maderam...Insulis Canariis; restricted to Desertas by Bannerman, 1914, Ibis p. 477.)

Habitat.—Pelagic Waters; nests in burrows or crevices on islands.

Distribution.—Breeds on northern Macaronesian islands of the eastern Atlantic (the Azores, Madeira, the Salvages, and Canary Islands).

Ranges at sea north to the Bay of Biscay (Martin and Rowlands 2001) and casually to the British Isles, western Europe (where accidental inland), and the Mediterranean region (Lewington et al. 1991).

Accidental off Nova Scotia (Sable Island, 1 September 1896; specimen; Dwight 1897; also recent sight reports) and Massachusetts (off Nantucket Island, 25 August 2007; photos; North American Birds 62:40, 62:190). A specimen from South Carolina (including Sri Lanka), the East Indies (to Sumbawa and Sulawesi), Philippines, Taiwan, and the Ryukyu, Bonin, and Volcano islands.

Winter.—From October 2010; Withrow and Schwitters 2012).

Casual or accidental on migration in Kamchatka and the Commander Islands. Accidental in the Aleutian Islands (juv. male, 12–14 October 2010, Shemya Island; Withrow and Schwitters 2012).

Notes.—See Notes under *Gallinula galeata*.

p. 90. A record of the Double-toothed Kite, *Harpagus bidentatus*, in the United States is recognized. After the last sentence in the Distribution statement, add the following new paragraph:

Accidental on the upper Texas coast (second-year bird, 4 May 2011, High Island, photo; Dunn et al. 2012).

pp. 121, 176, 220, 413, 473, 535, 613, 637, and 667. Change the citations for *Dendragapus obscurus*, *Limnodromus scolopaceus*, *Patagioenas fasciata*, *Tyrrhynus verticalis*, *Salpinx obsoletus*, *Oreothlypis celata*, *Chondistes grammacus*, *Passerina amoenæa*, and *Spinus psaltria* from “Say, 1823, in Long, Exped. Rocky Mount.” to “Say, 1822, in James, Acct. Exped. Rocky Mount.” These species were described by Thomas Say in *Account of an expedition from Pittsburgh to the Rocky Mountains*, compiled by Edwin James, which was published in what had heretofore been accepted to be early 1823. Woodman (2010) presented evidence that the publication was available and for sale in December 1822. Woodman also noted that James, rather than Long, who commanded the expedition, was the primary editor of the *Account*, which was compiled from the notes of several of the expedition’s members.

p. 123. Replace the citation for the genus name *Numida* with the following:

This was covered by ICZN Opinion 67 (International Commission on Zoological Nomenclature 1916); see also Kashin (1978) and Gregory and Dickinson (2012).

p. 137. After the account for *Gallinula galeata*, insert the following new account:

**Gallinula chloropus** (Linnaeus). Common Moorhen.

*Fulica Chloropus* Linnaeus, 1758, Syst. Nat. (ed. 10) 1:152. (in Europa = England.)

Habitat.—Freshwater marshes, lakes, and ponds with tall, dense emergent vegetation (Tropical to Temperate zones).

Distribution.—Breeds from the British Isles, southern Scandinavia, central Russia, southern Siberia, Sakhalin, and Japan south throughout most of Eurasia and Africa to the eastern Atlantic islands, southern Africa, the borders of the northern Indian Ocean (including Sri Lanka), the East Indies (to Sumbawa and Sulawesi), Philippines, Taiwan, and the Ryukyu, Bonin, and Volcano islands.

Winter.—From the British Isles, southern Scandinavia, southern Russia, and eastern China south throughout the remainder of the breeding range, casually to the Seven Islands of Izu.

Casual or accidental on migration in Kamchatka and the Commander Islands. Accidental in the Aleutian Islands (juv. male, 12–14 October 2010, Shemya Island; Withrow and Schwitters 2012).

Notes.—See Notes under *Gallinula galeata*.

pp. 141–217. Phylogenetic analyses of nuclear and mitochondrial DNA sequences (Baker et al. 2007, 2012) have shown that the current linear sequence of families in the order Charadriiformes does not accurately reflect their evolutionary relationships.
Replace the existing Notes under the heading Order CHARADRIIFORMES: Shorebirds, Gulls, Auks, and Allies with the following:

**Notes.**—The sequence of families in this order follows Baker et al. (2007, 2012).

Rearrange the sequence of suborders and families of Charadriiformes, with their included subfamilies, genera, and species, as follows:

**Charadrii**
- Burhinidae
- Recurvidistridae
- Haematopodidae
- Charadriidae

**Scolopaci**
- Jacanidae
- Scolopacidae

**Lari**
- Glareolidae
- Stercorariidae
- Alcidae
- Laridae

pp. 165–175. Phylogenetic analysis of nuclear and mitochondrial DNA sequences (Gibson and Baker 2012) has shown that the current generic limits and linear sequence of species within the tribe Calidridini do not accurately reflect their evolutionary relationships.

Delete the headings Genus *APHRIZA* Audubon, Genus *EURNYORHYNCHUS* Nilsson, Genus *LIMICOLA* Koch, Genus *TRYNGITES* Cabanis, and Genus *PHILOMACHUS* Merrem, and move the citations under these headings into the synonymy of *Calidris*. Change *Aphriza virgata* (Gmelin) to *Calidris virgata* (Gmelin), *Eurnyorhynchus pygmeus* (Linnaeus) to *Calidris pygmea* (Linnaeus), *Limicola falcinellus* (Pontoppidan) to *Calidris falcinellus* (Pontoppidan), *Tryngites subruficollis* (Vieillot) to *Calidris subruficollis* (Vieillot), and *Philomachus pugnax* (Linnaeus) to *Calidris pugnax* (Linnaeus).

Under the heading Genus *CALIDRIS* Merrem, replace the existing Notes with the following:

**Notes.**—Phylogenetic analyses of sequences of mitochondrial and nuclear DNA (Gibson and Baker 2012) indicate that the species previously known as *Aphriza virgata*, *Eurnyorhynchus pygmeus*, *Limicola falcinellus*, *Tryngites subruficollis*, and *Philomachus pugnax* form a clade with species already in *Calidris*. The name *Calidris* has priority for this clade (Banks 2012). Linear sequence of species derived from Gibson and Baker (2012).

Rearrange the sequence of species in *Calidris* as follows:

- *Calidris tenuirostris* (Horsfield)
- *Calidris canutus* (Linnaeus)
- *Calidris virgata* (Gmelin)
- *Calidris pugnax* (Linnaeus)
- *Calidris falcinellus* (Pontoppidan)
- *Calidris acuminata* (Horsfield)
- *Calidris himantopus* (Bonaparte)

- *Calidris ferruginea* (Pontoppidan)
- *Calidris temminckii* (Leisler)
- *Calidris subminuta* (Middendorff)
- *Calidris pygmea* (Linnaeus)
- *Calidris ruficollis* (Pallas)
- *Calidris alba* (Pallas)
- *Calidris alpina* (Linnaeus)
- *Calidris pitolocenemis* (Coues)
- *Calidris maritima* (Brünnich)
- *Calidris bairdii* (Coues)
- *Calidris minuta* (Leisler)
- *Calidris minutilla* (Vieillot)
- *Calidris fusciollis* (Vieillot)
- *Calidris subruficollis* (Vieillot)
- *Calidris melanotos* (Vieillot)
- *Calidris pusilla* (Linnaeus)
- *Calidris mauri* (Cabanis)

In the species account for *Calidris virgata*, replace the existing Notes with the following:

**Notes.**—Formerly placed in the genus *Aphriza*. See comments under *Calidris*.

In the species account for *Calidris pygmea*, replace the existing Notes with the following:

**Notes.**—Formerly placed in the genus *Eurnyorhynchus*. See comments under *Calidris*.

In the species account for *Calidris falcinellus*, insert the following:

**Notes.**—Formerly placed in the genus *Tryngites*. See comments under *Calidris*.

In the species account for *Calidris subruficollis*, insert the following:

**Notes.**—Formerly placed in the genus *Tryngites*. See comments under *Calidris*.

In the species account for *Calidris pugnax*, insert the following:

**Notes.**—Formerly placed in the genus *Philomachus*. See comments under *Calidris*.

p. 166. Change the designation of the type species of the generic name *Erolia* to "type, by monotypy, *Erolia variegata* Vieillot = *Tringa ferruginea* Pontoppidan." *Tringa ferruginea* is an earlier name for the same species as *Scolopax testacea* (Banks 2012).

p. 178. Replace the heading Subgenus *PHILOHELA* Gray with Subgenus *MICROPTERA* Nuttall and replace the current citation under this heading with:

Kashin (1978) and Gregory and Dickinson (2012) considered that *Microptera* was not preoccupied by *Micropterus* Lacépède, 1802.

p. 217. Change the heading Order *PTEROCOLIDIFORMES*: Sandgrouse to Order *PTEROCOELIFORMES*: Sandgrouse. The
family name Pteroclidae, an unjustified modification of Pteroclidae Bonaparte, 1831 (Bock 1994), was corrected in a previous supplement (Chesser et al. 2012), but the name of the order, which uses the same root, was not corrected.

p. 233. Following the account for Psitacula krameri, insert the following new heading and species account:

Genus AGAPORNIS Selby

Agapornis roseicollis (Vieillot). Rosy-faced Lovebird.

Habitat.—In North America, non-native plantings in deserts and residential neighborhoods; appears to be restricted to areas near water. In southwest Africa, occupies a variety of habitats, including dry wooded country, sub-desert steppe, savanna woodland, woodlands along rivers, and cultivated lands.

Distribution.—Resident in southwestern Africa from Angola and Namibia to northwestern South Africa. Introduced and established in the greater metropolitan Phoenix area, Arizona. Released individuals first noted in 1987; local flocks and colonies established by the mid-1990s. Now widely present in the Phoenix region (Corman and Wise-Gervais 2005, Radamaker and Corman 2011).

p. 236. Following the account for Aratinga pertinax, insert the following new heading and species account:

Genus NANDAYS Bonaparte

Nandayus nenday (Vieillot). Nanday Parakeet.

Psittacus nenday Vieillot, 1823, in Bonnaterre and Vieillot, Tabl. Encycl. Méth. (Ornithol.) 3 (93):1400. (Paraguay.)

Habitat.—Various non-native plantings in Florida and in southern California, where it is also partial to native sycamore trees; in South America partial to palm groves and open forests.

Distribution.—Resident in central-southern South America from southwestern Brazil and southeastern Bolivia to central Paraguay and northern Argentina. Introduced and established in peninsular Florida, primarily in the central Gulf Coast region (largest populations in Pinellas County) with smaller numbers near St. Augustine and on the southern Atlantic Coast. First releases detected in 1969 and considered established by 2004 (Pranty and Lovell 2004), with additional spreading by 2011 (Pranty and Lovell 2011). A small population present by 1985 in coastal southern California (primarily southern Ventura and Los Angeles counties; Pranty and Garrett 2011), but not yet considered established. Rare and local in Puerto Rico (introduced probably in the early 1970s), where found primarily along the northeast coast.

A small population that existed at Coney Island, Brooklyn, New York, has now disappeared. Escaped birds have been widely reported elsewhere in the United States.

Notes.—Formerly (AOU 1998) known as Black-hooded Parakeet. Also known as Nanday Conure.

p. 254. Analyses of mitochondrial and nuclear DNA sequences (Proudfoot et al. 2007, Wink et al. 2009) indicate that Otus flammeolus is not closely related to other species of Otus but is instead sister to species of Megascops.

Following the species account for Otus sunia, insert the following heading and Notes:

Genus PSILOSCOPS Coues

Psiloscops Coues, 1899, Osprey 3:144. Type, by original designation, Scops flammeola [sic] Kaup.

Notes.—Formerly merged with Otus (e.g., AOU 1983, 1998) but now treated as a separate genus on the basis of genetic data, which show it to be sister to Megascops (Proudfoot et al. 2007, Wink et al. 2009).

Change Otus flammeolus (Kaup) to Psiloscops flammeolus (Kaup), move the account for this species to follow the heading and Notes for Psiloscops, and replace existing Notes with the following:

Notes.—See Notes under Psiloscops. Genetic, vocal, and morphological differences between this species and screech-owls of the genus Megascops indicate that it is best placed in a separate genus (Wink et al. 2009). Also known as Flammulated Screech-Owl.

p. 257. Olson and Suárez (2008) noted that Gymnoglaux is a junior synonym of Gymnasio (now included in Megascops) and that a new genus name was needed for Gymnoglaux lawrencii. They described the new genus Margarobyas for this species.

Following the species account for Megascops nudipes, replace the heading Genus GYMNOGLAUX Cabanis with the following:

Genus MARGAROBYAS Olson and Suárez

Return the citation for Gymnoglaux to the synonymy of Megascops, and change the citation to the following: Gymnoglaux Cabanis, 1855, J. Ornithol. 3: 465. Type, by monotypy, Strix nudipes Daudin.

Change Gymnoglaux lawrencii Sclater and Salvin to Margarobyas lawrencii (Sclater and Salvin), place the account for this...
species to follow the heading for Margarobyas, and substitute the following for the Notes at the end of the species account:

**Notes.**—Formerly merged into *Otus*, following Marshall and King in Amadon and Bull (1988), as Cuban Screech-Owl, but separated on the basis of strong differences in morphology and vocal patterns. Formerly placed in *Gymnoglaux*, but this is a junior synonym of *Gymnasio* (Olson and Suárez 2008). Also known as Cuban Bare-legged Owl or Cuban Screech-Owl.

p. 294. *Thalurania fannyi* is treated as a junior synonym of *T. colombica*, following Donegan (2012b) and Remsen et al. (2013). Remove the current species accounts for *T. colombica* and *T. fannyi* and insert the following new species account:

**Thalurania colombica** (Bourcier). Crowned Woodnymph.

**Habitat.**—Tropical Lowland Evergreen Forest, Secondary Forest, Montane Evergreen Forest, Tropical Deciduous Forest (0–1,900 m).

**Distribution.**—Lowlands [*townsendi* group] of Caribbean slope from Guatemala and Belize south to Costa Rica and western and central Panama (east to Canal area and eastern Panamá province); lowlands to 1900 m [*colombica* group] of northern Colombia and western Venezuela; [*fannyi* group] eastern Panama (eastern Colón, Darién, and eastern San Blas) and northwestern Colombia; and [*hypochlora* group] Pacific slope of southwestern Colombia south to southwestern Peru.

**Notes.**—Groups: *T. townsendi* Ridgway, 1888 [Violet-crowned Woodnymph], *T. colombica* [Colombian Woodnymph], *T. fannyi* Delattre and Bourcier, 1846 [Green-crowned Woodnymph], and *T. hypochlora* Gould, 1871 [Emerald-bellied Woodnymph]. Formerly treated as two species *T. colombica* (including *townsendi*) and *T. fannyi* (including *T. hypochlora*) on the basis of Escalante-Piego and Peterson (1992), but merged due to evidence of unrestricted gene flow between populations (Donegan 2012b).

Change the current Notes for *Thalurania ridgwayi* to:

**Notes.**—Escalante-Piego and Peterson (1992) provided reasons for treating *T. ridgwayi* as a species distinct from *T. colombica*.

p. 352. The extralimital species *Automolus rufipes* is treated as a separate species from *A. rubiginosus*, following Krabbe (2008) and Remsen et al. (2013). Add the following sentence to the end of the existing Notes: Formerly included extralimital species *A. rufipes* Bangs, 1898 [Santa Marta Foliage-Gleaner], which is separated on the basis of differences in vocalizations (Krabbe 2008).

p. 355. The extralimital species *Dendrocincla turdina* is treated as a separate species from *D. fuliginosa*, following Weir and Price (2011) and Remsen et al. (2013). Remove mention of the *turdina* group from the distributional statement for *D. fuliginosa* and substitute the following for the existing Notes for this species:

**Notes.**—Groups: *D. meruloides* (Lafresnaye, 1851) [Plain-brown Woodcreeper], *D. fuliginosa* [Line-throated Woodcreeper], and *D. atrirostris* (d’Orbigny and Lafresnaye, 1838) [d’Orbigny’s Woodcreeper]. Formerly included extralimital species *D. turdina* (Lichtenstein, 1820) [Plain-winged Woodcreeper], which is separated on the basis of genetic and vocal differences (Weir and Price 2011).

p. 362. Change the English name of *Thamnophilus atrinucha* from Western Slaty-Antshrike to Black-crowned Antshrike, following Remsen et al. (2013), and replace the existing Notes with the following:

**Notes.**—Formerly known as Western Slaty-Antshrike, but genetic data indicate that *T. atrinucha* does not belong to the Slaty-Antshrike complex (Brumfield and Edwards 2007, Bravo 2012).

p. 366. *Terenura callinota* is transferred to the new genus *Euchrepomis*. Following the account for *Formicicora grisea*, replace the heading Genus *TERENURA* Cabanis and Heine and the citation under this heading with the following, citation, and Notes:

**Genus EUCHREPOMIS** Bravo et al.

**Notes.**—Newly separated from *Terenura* because genetic data (Bravo et al. 2012) indicate that the species *callinota* is not closely related to the type species of that genus.

Change *Terenura callinota* (Sclater) to *Euchrepomis callinota* (Sclater), place the account for this species under the heading and notes for *Euchrepomis*, make the appropriate changes in generic names or abbreviations within the existing Notes, and insert the following at the end of the existing Notes: Formerly placed in the genus *Terenura*. See comments under *Euchrepomis*.

p. 368. *Myrmeciza zeledoni* is treated as a separate species from the extralimital species *M. immaculata*, following Donegan (2012a) and Remsen et al. (2013). Replace the account for *M. immaculata* with the following new species account:

**Myrmeciza zeledoni** Ridgway. Zeledon’s Antbird.

**Habitat.**—Tropical Lowland Evergreen Forest (300–1,700 m; upper Tropical and Subtropical zones).

**Distribution.**—*Resident* on the Caribbean slope of Costa Rica (Cordillera de Talamanca, Cordillera Central, and Dota Mountains) and in Panama (recorded Bocas del Toro, Chiriquí, Veraguas, and eastern Darién).

**Notes.**—Formerly considered conspecific with *M. immaculata* (Lafresnaye, 1845) [Immaculate Antbird] of northern South America, but treated as a separate species on the basis of vocal differences (Donegan 2012a).

p. 416. *Schiffornis veraepacis* and *S. stenorhyncha* are treated as separate species from the extralimital species *S. turdina,*
following Nyári (2007), Donegan et al. (2011), and Remsen et al. (2013). Delete the species account for \textit{S. turdina} and replace it with new accounts for \textit{S. veraepacis} and \textit{S. stenorhyncha} as follows:

\textbf{Schiffornis veraepacis} (Sclater and Salvin). Northern Schiffornis.

\textbf{Habitat.}—Tropical Lowland Evergreen Forest (0–800 m; Tropical Zone).

\textbf{Distribution.}—Resident on the Gulf-Caribbean slope of Middle America from southern Veracruz, northern Oaxaca, Tabasco, northern Chiapas, Campeche and Quintana Roo, Mexico, south to Nicaragua, on both slopes of Costa Rica (absent from the dry northwest) and Panama (east to Coclé and western Panama province), and western Colombia through Ecuador south to northwestern Peru (Tumbes).

\textbf{Schiffornis stenorhyncha} (Sclater and Salvin). Russet-winged Schiffornis.

\textbf{Habitat.}—Tropical Lowland Evergreen Forest (0–600 m; Tropical Zone).

\textbf{Distribution.}—Tacarcuna region (Darién), Panama, south to northern Colombia including the Magdalena Valley and northwestern Venezuela (east to at least Aragua).

pp. 423–426. Phylogenetic analyses of syringeal characters (Prum 1992) and nuclear and mitochondrial DNA sequences (Rêgo et al. 2007, Tello et al. 2009, McKay et al. 2010) indicate that \textit{Xenopipo} and \textit{Chloropipo} form a clade and that \textit{Chloropipo} may be paraphyletic with respect to \textit{Xenopipo} (Prum 1992). These genera are merged pending further data, following Remsen et al. (2013).

Remove the heading Genus \textit{CHLOROPIPO} Cabanis and Heine, move the citation for \textit{Chloropipo} from p. 423 into the synonymy of \textit{Xenopipo}, change \textit{Chloropipo holochlora} Sclater to \textit{Xenopipo holochlora} (Sclater), place the account for this species under the heading for \textit{Xenopipo}, and replace the existing Notes with: Formerly placed in the genus \textit{Chloropipo}. See comments under \textit{Xenopipo}.

Following the species account for \textit{Xenopipo holochlora}, insert the following heading and Notes:

Genus \textbf{DIXIPHIA} Reichenbach

Remove the heading Genus \textit{PIPRA} Linnaeus and the citation and notes under this heading, change \textit{Pipra pipra} (Linnaeus) to \textit{Dixiphia pipra} (Linnaeus), place the account for this species under the heading for \textit{Dixiphia}, delete the first sentence of the existing Notes, make the appropriate changes in generic names or abbreviations within the existing Notes, and insert the following at the end of the existing Notes: Formerly placed in the genus \textit{Pipra}. See comments under \textit{Dixiphia}.

Following the species account for \textit{Dixiphia pipra}, insert the following heading and Notes:

Genus \textbf{CERATOPIPRA} Bonaparte

\textbf{Notes.}—See comments under \textit{Dixiphia}.

Change \textit{Pipra mentalis} Sclater to \textit{Ceratopipra mentalis} (Sclater) and change \textit{Pipra erythrocephala} (Linnaeus) to \textit{Ceratopipra erythrocephala} (Linnaeus), place the accounts for these species under the heading for \textit{Ceratopipra}, make the appropriate changes in generic names or abbreviations within the existing Notes, and insert the following at the end of the existing Notes for each species: Formerly placed in the genus \textit{Pipra}. See comments under \textit{Dixiphia}.

Under the heading Family \textbf{PIPIDAE:} Manakins on p. 423, insert the following Notes:
**Notes.**—Linear sequence of genera and species follows Rêgo et al. (2007), Tello et al. (2009), and McKay et al. (2010).

Rearrange the sequence of genera and species in the Pipridae as follows:

Genus **Corapipo** Bonaparte
**Corapipo altera** Hellmayr

Genus **Chiroxipha** Cabanis
**Chiroxipha lanceolata** (Wagler)
**Chiroxipha linearis** (Bonaparte)

Genus **Xenopipo** Bonaparte
**Xenopipo holochlora** (Sclater)

Genus **Dixipha** Reichenbach
**Dixipha pipra** (Linnaeus)

Genus **Ceratopipra** Bonaparte
**Ceratopipra mentalis** (Sclater)
**Ceratopipra erythrophlepha** (Linnaeus)

Genus **Manacus** Brisson
**Manacus candei** (Parzudaki)
**Manacus aurantiacus** (Salvin)
**Manacus vitellinus** (Gould)

Genus **Lepidothrix** Bonaparte
**Lepidothrix coronata** (Spix)

p. 480. The extralimital species *Troglydtes cobbi* is treated as separate from *T. aedon*, following Woods (1993) and Remsen et al. (2013). Remove mention of the Falkland Islands from the distributional statement for *T. aedon* and add the following to the end of the existing Notes for this species: Formerly included extralimital species *T. cobbi* Chubb, 1909 [Cobb’s Wren], which is separated on the basis of morphological, ecological, genetic, and vocal differences (Woods 1993, Campagna et al. 2012).

p. 515. Phylogenetic analyses of nuclear and mitochondrial DNA sequences (Lovette and Rubinstein 2007, Lovette et al. 2012) have shown that the current linear sequence of genera and species in the family Mimidae does not accurately reflect their evolutionary relationships.

Under the heading Family **MIMIDAE**: Mockingbirds and Thrashers, add the following to the end of the existing Notes: Linear sequence of genera and species follows Lovette et al. (2012).

Rearrange the sequence of genera and species in the Mimidae as follows:

Genus **Melanotis** Bonaparte
**Melanotis caerulescens** (Swainson)
**Melanotis hypoleucus** Hartlaub

Genus **Melanoptila** Sclater
**Melanoptila glabrirostris** Sclater

Genus **Dumetella** Wood
**Dumetella carolinensis** (Linnaeus)

Genus **Ramphocinclus** Lafresnay
**Ramphocinclus brachyrurus** (Vieillot)

Genus **Allenia** Cory
**Allenia fusca** (Müller)

Genus **Margarops** Sclater

**Margarops fuscatus** (Vieillot)

Genus **Cinclorhynchus** Gray
**Cinclorhynchus fusca** (Gould)
**Cinclorhynchus gutturalis** (Lafresnay)

Genus **Toxostoma** Wagler
**Toxostoma curvirostre** (Swainson)
**Toxostoma ocellatum** (Sclater)
**Toxostoma rufum** (Linnaeus)
**Toxostoma longirostre** (Lafresnay)
**Toxostoma guttatum** (Ridgway)
**Toxostoma bendirei** (Coues)
**Toxostoma cinereum** (Xántus de Vesey)
**Toxostoma redivivum** (Gambel)
**Toxostoma lecontei** Lawrence
**Toxostoma crissale** Henry

Genus **Oreoscoptes** Baird
**Oreoscoptes montanus** (Townsend)

Genus **Mimus** Boie
**Mimus gundlachii** Cabanis
**Mimus graysoni** (Lawrence)
**Mimus gilvus** (Vieillot)
**Mimus polyglottos** (Linnaeus)

**Cinclorhynchus** Gray
**Cinclorhynchus fusca** (Gould)
**Cinclorhynchus gutturalis** (Lafresnay)

Genus **Toxostoma** Wagler
**Toxostoma curvirostre** (Swainson)
**Toxostoma ocellatum** (Sclater)
**Toxostoma rufum** (Linnaeus)
**Toxostoma longirostre** (Lafresnay)
**Toxostoma guttatum** (Ridgway)
**Toxostoma bendirei** (Coues)
**Toxostoma cinereum** (Xántus de Vesey)
**Toxostoma redivivum** (Gambel)
**Toxostoma lecontei** Lawrence
**Toxostoma crissale** Henry

Genus **Oreoscoptes** Baird
**Oreoscoptes montanus** (Townsend)

Genus **Mimus** Boie
**Mimus gundlachii** Cabanis
**Mimus graysoni** (Lawrence)
**Mimus gilvus** (Vieillot)
**Mimus polyglottos** (Linnaeus)

p. 530–531. Replace Genus **PTILOGONYS** Swainson with Genus **PTILOGONYS** Swainson, remove “[sic]” from the citation, and replace the existing Notes with the following:

**Notes.**—AOU (1998) considered *Ptilogonys* a justifiable emendation of *Ptilogonys*, but it is an incorrect subsequent spelling and has no nomenclatural standing (Kashin 1978, Browning 1989, Gregory and Dickinson 2012).

Change *Ptilogonys cinereus* Swainson to *Ptilogonys cinereus* Swainson and remove “[sic]” from the citation for this species. Change *Ptilogonys caudatus* Cabanis to *Ptilogonys caudatus* Cabanis. On p. 530, change Family **PTILOGONATIDAE**: Silky-flycatchers and insert the following at the beginning of the existing Notes: Formerly (AOU 1983, 1998) known as Ptilogonatidae, but family name corrected in keeping with correction of the genus name *Ptilogonys*. See comments under *Ptilogonys*.

p. 570. Change *Chlorospingus ophthalmicus* (Du Bus de Gisignies, 1847) to *Chlorospingus flavopectus* (Lafresnay, 1840), and change the citation for the species to:

**Arremon flavo-pectus** Lafresnay, 1840, Rev. Zool. [Paris], Aug., p. 227. (Santa-Fé de Bogota, Colombia.)

Change *ophthalmicus* to *flavopectus* in the existing Distribution and Notes of the species account, and insert the following at the end of the existing Notes: Formerly *Chlorospingus ophthalmicus* (Du Bus de Gisignies), but the name *C. flavopectus* has priority (contra Zimmer 1947).

p. 614. *Artemisiospiza nevadensis* is treated as a species separate from *A. belli*. Remove the current account for *A. belli* and insert the following new species accounts:

**Artemisiospiza nevadensis** (Ridgway). Sagebrush Sparrow.
Poospiza belli var.? nevadensis Ridgway, 1873, Bull. Essex Inst., 5, no. 11, Nov., p. 191. (Entire area of the Middle Province of the U.S. = West Humboldt Mts., Nevada.)

Habitat.—Sagebrush and salt-bush (Atriplex) desert scrub; in migration and winter also in arid plains with sparse bushes, grasslands, and open situations with scattered brush.

Distribution.—Breeds primarily in Great Basin from central interior Washington, eastern Oregon, southern Idaho, southwestern Wyoming, and northwestern Colorado south to eastern California (south to the Owens Valley), southern Nevada, southwestern Utah, northeastern Arizona, and northwestern New Mexico. One breeding record for eastern Montana.

Winters from southeastern California, central Nevada, southwestern Utah, northern Arizona, and central New Mexico south to central Baja California, northern Sonora, northern Chihuahua, and western Texas.

Casual in the Pacific coastal region from southwestern British Columbia southward, and to western Montana, eastern Wyoming, southwestern South Dakota, eastern Colorado, western Kansas, and western Oklahoma; a sight record for Nebraska.

Notes.—Formerly conspecific with A. bellii, but treated as a separate species on the basis of differences in mitochondrial DNA, morphology, and ecology, and limited gene flow at the contact zone in eastern California (Cicero and Johnson 2007, Cicero and Koo 2012). See comments under Artemisiospiza.

Artemisiospiza belli (Cassin). Bell’s Sparrow.

Habitat.—Chaparral (dominated by Adenostoma fasciculatum or Artemisia californica) and salt-bush desert scrub.

Distribution.—Resident in western California (from Trinity County south, including San Clemente Island) to central Baja California; and also in San Joaquin Valley and Mojave Desert areas of east-central California. The latter populations (A. b. canescens) undergo post-breeding, up-slope migrations into coastal and Sier- ran foothills (Johnson and Marten 1992).

Winters throughout the breeding range, in the Salton Sea region, and in western Arizona (Phillips et al. 1964).

Notes.—Populations of A. b. canescens of the San Joaquin Valley and Mojave Desert differ in morphology and ecology from belli and may represent a distinct species. Analyses of mtDNA indicate that Mojave Desert populations of canescens are distinctive, whereas canescens from the San Joaquin Valley share haplotypes with coastal belli (Cicero and Koo 2012). See comments under A. nevadensis and Artemisiospiza.

p. 659. Before the account for Leucosticte tephrocotis, insert the following new species account:

Leucosticte arctica (Pallas). Asian Rosy-Finch.

Habitat.—Breeds mostly on tundra or on mountains above timberline on rocky terrain. Winters in barren and rocky fields with scattered vegetation and snow-free beaches and headlands; also open woodland.

Distribution.—Breeds in mountainous southern Siberia and adjacent Mongolia in the Altai and Sayan ranges east in the southern Russian Far East to Koryakland, Kamchatka, and the northern Kuril Islands; possibly breeds in the mountains of Hokkaido. Most largely resident within the breeding range, with seasonal elevational movements. The eastern birds are migratory, however, wintering south to Ussuriland, Manchuria, Sakhalin, and Honshu; irregularly or casually to Kyushu, Tsushima, Izu Islands, and Hachijojima Island.

p. 660. Phylogenetic analyses of nuclear and mitochondrial DNA sequences (Smith et al. 2013) have shown that the current linear sequence of species in the genus Haemorhous does not accurately reflect their evolutionary relationships.

Under the heading Genus HAEMORHOUS Swainson, add the following to the end of the existing Notes: Linear sequence of species follows Smith et al. (2013).

Rearrange the sequence of species of Haemorhous as follows:

Haemorhous mexicanus (Müller)
Haemorhous purpureus (Gmelin)
Haemorhous cassini (Baird)

p. 671. Delete the heading Subfamily DREPANIDINAE: Hawaiian Honeycreepers and the Notes that follow this heading and move the included genera and species to a position in the Cardueli- nae following Pyrrhula pyrrhula. Change the heading Subfamily CARDUELINAE: Cardueline Finches to Subfamily CARDUELI- NAE: Cardueline Finches and Hawaiian Honeycreepers. Under this new heading, insert the following:

Notes.—Analyses of morphology (James 2004) and mito- chondrial and nuclear DNA sequences (Lerner et al. 2011, Zucon et al. 2012) indicate that the Hawaiian honeycreepers, previously (e.g., AOU 1998) considered to constitute a separate subfamily (Drepanidinae), are nested within the Cardueliniae.

p. 676. Change Oreomystis mana (Wilson) to Loxops mana (Wilson), move the account for this species to precede the species account for Loxops caeruleirostris, and add the following to the end of the account: Notes.—Formerly (AOU 1998) placed in the genus Oreomystis, but analyses of osteological and mitochondrial and nuclear genetic data (James and Olson 1991, Fleischer et al. 1998, James 2004, Reding et al. 2009, Lerner et al. 2011) indicate that it is only distantly related to type species O. bairdi and is bet- ter placed in Loxops. Sometimes placed in the monotypic genus Manucerthia Pratt.
Following the citation for Loxops, insert the following:

Delete the existing Notes for the genus Oreomystis.

p. 686. Delete the account for Pterodroma solandri from the Appendix.

p. 686–687. Delete the account for Pterodroma feae from the Appendix.

p. 693. Delete the account for Nandayus nenday from the Appendix.

pp. 705 ff. Make the following changes to the list of French names of North American birds:

Insert the following names in the proper position as indicated by the text of this supplement.

Pterodroma solandri
Pterodroma feae
Puffinus baroli
Glassinula chloropus
Calidris virgata
Calidris pugnax
Calidris falcinellus
Calidris pygmea
Calidris subrugulosa
Ptisoclops flammeolus
Margarobryas lawrencii
Agapornis roseicollis
Nandayus nenday
Euchrepolis callinota
Myrmeciza zeledoni
Schiffornis veraepacis
Schiffornis stenorhynchus
Xenopipo holochlora
Dixiphia pipra
Ceratopipra mentalis
Ceratopipra erythrophala
PTILOGONIDAE
Ptisogony cinereus
Ptisogony caudatus
Chloropipus ophthalmicus
Oreomystis mana

Pérelle de Solander
Pétrél gongon
Puffin de Macaronésie
Bécasteau du ressac
Combattant varié
Bécasteau falcinelle
Bécasteau spatule
Bécasteau roussâtre
Petit-duc nain
Petit-duc de Cuba
Inséparable rosegorge
Conure nanday
Grisin à croupion roux
Alapi immaculé
Antriade turdoïde
Manakin vert
Manakin à cuisse jaunes
Manakin à tête d’or

Rearrange the sequence of families from BURHINIDAE to ALCIDAE as indicated by the text of this supplement.

Rearrange the sequence of genera and species in PIPRIDAE, MIMIDAE and FRINGILLIDAE as indicated by the text of this supplement.

Rearrange the species sequence in Calidris and Haemorhous as indicated by the text of this supplement.

Correct Threnetes ruckeri from Ermite de Rücker to Ermite de Rucker.

Delete the following names from APPENDIX (Part 1):

Pterodroma solandri
Pterodroma feae
Nandayus nenday

Pérelle de Solander
Pétrél gongon
Conure nanday

Proposals considered but not accepted by the committee included recognition of Thalasseus acuflavidus (Cabet’s Tern) as a species distinct from T. sandvicensis (Sandwich Tern), Glaucidium cobanense (Guatemalan Pygmy-Owl) as a species distinct from G. noia (Northern Pygmy-Owl), Melanerpes santacruzi (Velasquez’s Woodpecker) as a species distinct from M. aurifrons (Golden-fronted Woodpecker), and Myiarchus flavidior (Ridgway’s Flycatcher) as a species distinct from M. nuttingi (Nutting’s Flycatcher); division of Branta canadensis (Canada Goose) and Sitta carolinensis (White-breasted Nuthatch) into two or more species; and merger of all North American species of rosy-finches (Leucosticte spp.) into American Rosy-Finch (L. tephrocotis). A proposal to replace the genus name Nyctanassa with the prior name Nyctotherodius was rejected in favor of petitioning the ICZN to continue to use the more recent name.
