BioOne Complete (complete.BioOne.org) is a full-text database of 200 subscribed and open-access titles in the biological, ecological, and environmental sciences published by nonprofit societies, associations, museums, institutions, and presses.

Your use of this PDF, the BioOne Complete website, and all posted and associated content indicates your acceptance of BioOne's Terms of Use, available at www.bioone.org/terms-of-use.

Usage of BioOne Complete content is strictly limited to personal, educational, and non - commercial use. Commercial inquiries or rights and permissions requests should be directed to the individual publisher as copyright holder.

BioOne sees sustainable scholarly publishing as an inherently collaborative enterprise connecting authors, nonprofit publishers, academic institutions, research libraries, and research funders in the common goal of maximizing access to critical research.

Frontispiece. The islands and archipelagos of northwestern Mexico are critically important for the conservation of many seabird species, such as: Top Left – Yellow-footed Gull (*Larus livens*), which breeds only in the Gulf of California; Top Right – Black-vented Shearwater (*Puffinus opisthomelas*), of which 95% of the global population breeds on Natividad Island; Bottom – Laysan Albatross (*Phoebastria immutabilis*) pictured here on Guadalupe Island, but it also nests farther south in the species only subtropical breeding colony in the world on the Revillagigedo Archipelago. Photos by Victor Ayala Perez (top left and top right) and Yuri Vladimir Albores Barajas (bottom).
