Cover image: Nanophyes marmoratus (Goze, 1777), known as the purple loosestrife weevil, illustrated by Mark Russell (published with his kind permission). The genus Nanophyes and its type species Nanophyes marmoratus were placed on the Official Lists of Generic and Specific Names in Zoology by rulings in Opinion 1526 (BZN 46: 67-68). The purple loosestrife weevil is an important biocontrol agent against the European weed Lythrum salicaria L. in North America and an exceedingly diverse species in colour pattern.
