COVER: In northern Cameroon, productivity and nest success of the Grasshopper Buzzard (*Butastur rufipennis*) in natural habitat and agricultural areas are similar because in agricultural areas the benefit of less predation compensates for the lower abundance of prey (Buij et al., pp. 47–57). Photograph of an adult Grasshopper Buzzard feeding on a swarm of winged termites, northern Cameroon, by Ralph Buij, [ralph.buij@gmail.com](mailto:ralph.buij@gmail.com).
