BioOne Complete (complete.BioOne.org) is a full-text database of 200 subscribed and open-access titles in the biological, ecological, and environmental sciences published by nonprofit societies, associations, museums, institutions, and presses.

Your use of this PDF, the BioOne Complete website, and all posted and associated content indicates your acceptance of BioOne's Terms of Use, available at www.bioone.org/terms-of-use.

BioOne sees sustainable scholarly publishing as an inherently collaborative enterprise connecting authors, nonprofit publishers, academic institutions, research libraries, and research funders in the common goal of maximizing access to critical research.

Usage of BioOne Complete content is strictly limited to personal, educational, and non-commercial use. Commercial inquiries or rights and permissions requests should be directed to the individual publisher as copyright holder.

LUNDELLIA

December 2015, Number 18

CONTENTS

Cover photo: Species of *Meconopsis* commonly hybridize in the wild as documented in the article by Xiao and Simpson in this issue. The ability to hybridize has also allowed horticultural breeders to produce beautiful new ornamental plants such as this garden hybrid named "Mrs. Jebb" growing in the Royal Botanical Garden Edinburgh. Photo by Wei Xiao, 2009.

Lundellia, Number 18 was published 9 December 2015.
