BioOne Complete (complete.BioOne.org) is a full-text database of 200 subscribed and open-access titles in the biological, ecological, and environmental sciences published by nonprofit societies, associations, museums, institutions, and presses.

Your use of this PDF, the BioOne Complete website, and all posted and associated content indicates your acceptance of BioOne's Terms of Use, available at www.bioone.org/terms-of-use.

Usage of BioOne Complete content is strictly limited to personal, educational, and non - commercial use. Commercial inquiries or rights and permissions requests should be directed to the individual publisher as copyright holder.

BioOne sees sustainable scholarly publishing as an inherently collaborative enterprise connecting authors, nonprofit publishers, academic institutions, research libraries, and research funders in the common goal of maximizing access to critical research.

uMdloti, KwaZulu Natal, South Africa. The coastline is a dynamic environment. Complex nonlinear interactions between waves, weather and currents drive physical processes that occur at a range of temporal and spatial scales. This image is taken with a delayed exposure to reveal some of these processes. Feedback mechanisms between waves, currents and the coastline lead to interesting features. Process-based models that attempt to predict such changes are computationally demanding. Stochastic models are an attractive alternative because they are less computationally demanding. However, many of these models do not retain the physical links between the drivers of shoreline change. Recent advances in stochastic modelling that exploit links between weather and waves present a new method to explore shoreline change due to fluctuations in wave behaviour (Corbella, Pringle, and Stretch, 2015). These modelling advances aid researchers in determining coastal processes, such as the influence of the warm Mozambique current on the subtropical beaches of KwaZulu Natal (Photograph taken April 2016 by Dr. Justin Pringle, University of KwaZulu Natal, KwaZulu Natal, South Africa.)
