

Table S2. Effect of removal of DMSO after fertilization on normal development. The number of normally hatched larvae among 50 inseminated eggs is shown. In each experiment, the sperm samples were obtained from a single male, and the experiments were repeated using individual males #1–18. ASW, artificial seawater.

Concentration of DMSO (%)	Wash with ASW	Individual Male																		Average
		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	
10	+								21	6	30	3	2	0	0	3	28	27	19	12.6
	-								22	2	21	4	0	0	0	0	31	16	13	9.9
12.5	+								14	20	25					5		17	21	17.0
	-								16	11	5					0		13	16	10.2
15	+	0	21	5	15	19	39	23	6	21	11	26	4	9	4	26	39	19	19	17.0
	-	0	19	2	0	6	10	10	0	7	1	2	4	2	4	0	29	2	14	6.2
17.5	+	2	2	9	4	11	22	21												10.1
	-	0	5	0	0	1	2	5												1.9
