Supplementary Material

Table S1. Comparison of mean relative ambient humidity at the different elevational belts sampled for two of the three localities studied in the Bolivian Andes. Localities correspond to Quime and Sorata as in Figure 1. Grouping information using the Fisher LSD Method and 95% Confidence Interval are presented, means that do not share a letter are significantly different.

Factor	N	Mean % RH	Grouping
Night % RH	135	99.9691	A
Later Afternoon % RH	42	98.1998	A
Mid-Afternoon % RH	60	91.607	C
Morning % RH	69	95.2478	B
