

Willdenowia 50(1) – Electronic supplement

ZE-HUAN WANG, NORBERT KILIAN, YA-PING CHEN & HUA PENG

***Sinoseris* (Crepidinae, Cichorieae, Asteraceae), a new genus of three species endemic to China, one of them new to science**

Electronic supplement to: Wang Z.-H., Kilian N., Chen Y.-P. & Peng H. 2020: *Sinoseris* (Crepidinae, Cichorieae, Asteraceae), a new genus of three species endemic to China, one of them new to science. – Willdenowia 50: 91–110. doi: <https://doi.org/10.3372/wi.50.50109>

Alignments

The ITS and the plastid DNA marker alignments are provided (1) as compressed XML files (suffix .pde) with marker annotations, being the native format of the PhyDE alignment editor (<http://www.phyde.de/>), and (2) as nexus files (suffix .nex), also including the simple indel coding matrix generated with SeqState (<http://bioinfweb.info/Software/SeqState>). The plastid DNA marker alignment is given in the nexus version as used for the analyses, excluding two length-variable poly-T stretches in the *psbA-trnH* partition because of homology uncertainty.
