APPENDIX S10. Principal coordinates analysis plots using Bray–Curtis distances of AMF communities for 90% similar OTUs (A–C), 95% similar OTUs (D–F), and 97% similar OTUs (G–I), showing data sets that include all clustered OTUs (A, D, G), data sets that exclude singletons (B, E, H), and data sets that exclude OTUs with fewer than 10 constituent sequences (C, F, I). Symbols represent samples collected at El Eden (red circles) and La Higuera (blue triangles). Vectors represent soil properties with statistically significant relationships (PERMANOVA $P < 0.05$) to AMF community structure.
